

LINE&ANTIAGING CHANGE

"18 years of research in pursuit of beauty
Change Clinic, a name you can trust and rely on."

CHANGE CLINIC REPRESENTATIVE DIRECTOR
CHANG DOO YEOUL

Profile.

- Graduated from Seoul National University College of Medicine
- Completed graduate school at Seoul National University College of Medicine
- Visiting Professor at Samsung Medical Center
- 4th and 5th President of KAAM
- President of IAAP
- President of KAFC

Authored Books.

- Practical Guide to Thread Lifting
- S-Line Story (Co-author)
- Specialized Textbook on Obesity and Body Contouring
- Selected as one of the "Top 20 Masters of Aesthetic Plastic Surgery in Korea"

Academy
Presentation.

2024–2025

- In-house training for international doctors (Indonesia, Middle East, Australia, Singapore, Malaysia, Thailand)
- 1st–4th MEM (Speaker at MINT International Expert Meeting)
- Academic Symposium JAM KOREA Webinar
- Training for Hong Kong doctors at CGBIO Academy
- Guest lecture at Nuruk Clinic, Indonesia

2022–2023

- Asia Injection Leader's Forum
- Korea–China D2D Exchange Conference
- Australia NSS (Non-Surgical Symposium)
- Thailand Thread Lifting LIVE Academy

2016–2021

- Trainer-to-Trainer Lecture on MINT in Thailand
- International Union of Aesthetic Plastic Surgery, Shanghai Academic Conference
- MINT Doctor Training Program in the U.S. (D2D / U-must)
- LA Seminar, International IFAAS Conference

2011–2015

- Invited visit to Lidu Hospital, China
- Spain International Aesthetics Conference
- Asia International Aesthetic Medicine Forum
- Speaker at European Congress of Aesthetic Medicine

2008–2010

- Plastic Surgeon Training in Taiwan & Hong Kong

Facial contouring without bone shaving

FaceTite FACE TITE

◆ With FDA-approved liposuction equipment from the U.S., you can experience fat melting, suction, and skin tightening effects all at once. This is the world’s first procedure that delivers radiofrequency through both internal and external electrodes to improve skin sagging. Temperature, resistance, and power are continuously monitored, ensuring a systematic treatment process.

① **No burden of general anesthesia**
Only local or sleep sedation is used

② Minimal discomfort after surgery, **enabling a quick return to daily life**

③ Skin tightening **effect through soft tissue** and skin contraction

④ **Precise treatment possible even in areas** that were previously difficult to operate on

Thread Lifting

- ◆ Uses medical threads to directly lift and fix the skin
- ◆ Refines sagging facial contours
- ◆ Stimulates collagen and elastin production around the inserted threads, enhancing skin elasticity

Patent-certified minimally invasive facial tissue fixation lifting - Mint Lifting

Representative Director Dr. Jang Doo-Yeoul patented the rotary molding structure technique. With higher density threads that do not break, the procedure offers longer-lasting results compared to conventional thread lifting.

A new paradigm in thread lifting – longer lasting and more powerful Dooth patented thread lifting technology

T-shaped barbed thread

- DOOTH threads are T-shaped, maintaining fixation power even after the ends dissolve
- Tissue-friendly barb design minimizes tissue damage and delivers stronger, longer-lasting results

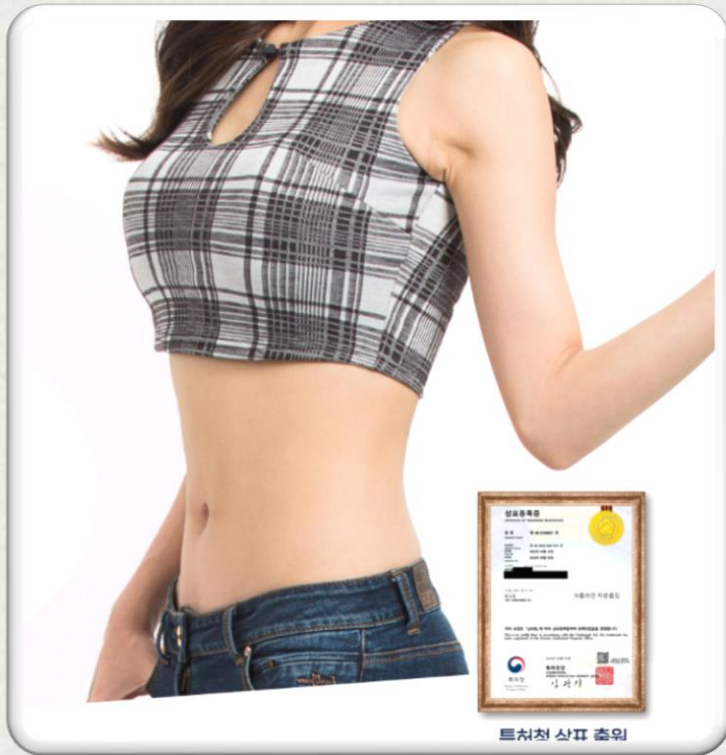

Threads with different front and back structures

- The front part lifts the tissue
- The back part holds it in place
- Provides the same fixation power without the hassle of tying knots

CHANGE BodyTite

Fat removal and skin tightening — all at once!

BodyTite is the most advanced liposuction device to date, **using FRAL (Radio-Frequency Assisted Liposuction)** technology that addresses the shortcomings of conventional liposuction

1 Minimally invasive technique reduces swelling and bleeding

2 Simultaneously achieves blood vessel coagulation, fat liquefaction, and skin tightening

3 Continuous monitoring of temperature, resistance, depth, and power on screen

4 Promotes collagen regeneration, effective for lifting sagging skin

CHANGE – Hip Augmentation with Fat Grafting

Enhance your buttock volume for a firm and curvy S-line! With CHANGE hip augmentation, you can immediately enjoy a confident silhouette and a lifted, firm look.

➤ Hip Fat Grafting & Stem Cells

Used when overall volume enhancement or fat redistribution is needed for buttock lift.

- Based on 18 years of CHANGE liposuction and grafting expertise, this method not only improves fat survival rate but also minimizes side effects at the donor site.
- Stem cells are used together to further enhance engraftment.

➤ Hip Filler

For those who are hesitant about surgical procedures like fat grafting.

- ① Filler for overall volume
- ② Filler for upper buttock volume
- ③ Filler for side buttock volume

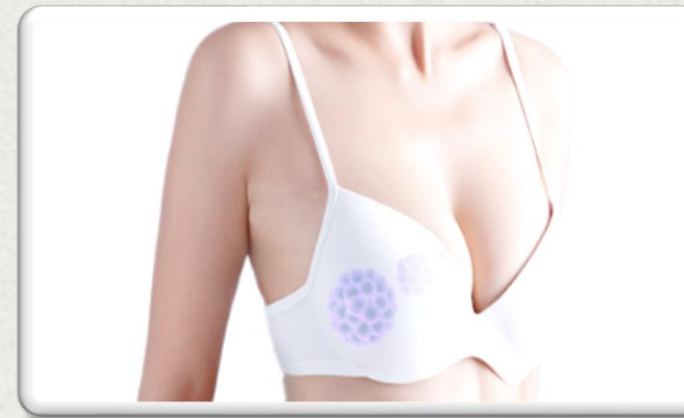

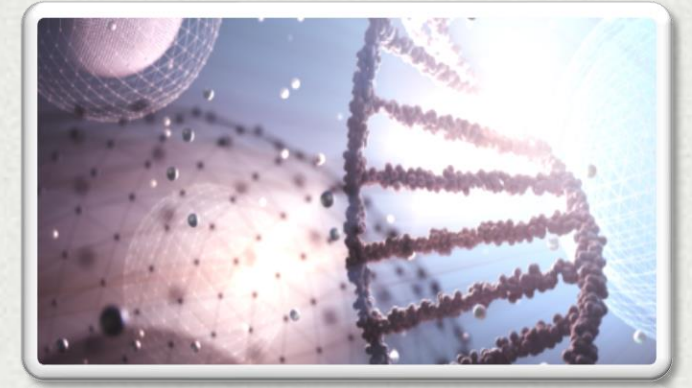

➤ Hip Thread Lifting

For sagging skin, thread lifting combines lifting threads, volumizing threads, and fixing threads.

- ① Method that lifts fat toward the iliac crest area
- ② Method that gathers fat from the entire buttock toward the center

CHANGE – Autologous Fat Graft Breast Augmentation

CHANGE's fat graft breast augmentation offers quick recovery, natural shape, low risk of rejection due to use of your own tissue, and a high fat survival rate.

High Fat Graft Survival Rate:

- ✓ Evenly injects micro-fat and growth factors into multiple layers of the skin
- ✓ Minimizes tissue damage and maintains volume for a long time

Securing Pure Micro-Fat:

- ✓ Centrifugal separation
- ✓ Ensures high-survival-rate fat by removing impurities and blood before grafting

Skin Regeneration:

- ✓ Inject PRP (Platelet-Rich Plasma) growth factors to enhance fat survival
- ✓ Promotes skin regeneration / improves scars and fine wrinkles
- ✓ Brightens skin tone

Two Body

★CHANGE – Ulthera Lifting

Collagen production using ultrasound!

- ✓ Ulthera-induced heat triggers the body's natural immune response at treated areas, leading to collagen regeneration.
- ✓ Benefits: improves pores and wrinkles, treats scars, and provides lifting effects.

★ CHANGE Thermage

Cools the epidermis while regenerating collagen in the dermis, resulting in a tightening effect on the deeper layers of the skin.

- ✓ Applies Thermage principles to generate heat within skin tissue.
 - ✓ Delivers high-frequency (RF) energy to stimulate collagen regeneration.
- Benefits: Improves fine wrinkles, tightens pores, enhances skin elasticity, and addresses various signs of skin aging.

★★CHANGE DENSITY

Deep and wide skin penetration using dual-frequency RF!

- ✓ Utilizes both monopolar and bipolar radiofrequency at 6.78MHz.
 - ✓ The energy reaches deep skin layers, including the dermis (where collagen and elastin are), subcutaneous fat, and SMAS (muscle fascia) layer.
- Benefits: lifting, improved dermal elasticity, reduced fine lines, enhanced firmness, and collagen remodeling.

★ ★ CHANGE VIRTUE

Maximizes treatment results by targeting specific skin depths!

- ✓ Delivers radiofrequency energy deep into the dermis
 - ✓ Stimulates dermal tissuePromotes collagen and elastin regeneration
 - ✓ Helps build healthier, firmer skin
- Benefits: When targeting fat tissue, it enhances facial contouring and improves local fat reduction.

★ CHANGE LINEARZ

Adjustable depth with a single cartridge

Benefits: Enhances skin elasticity (lifting), promotes fat breakdown, and improves redness and pigmentation issues.

★ CHANGE Titanium

A new paradigm in lifting using triple simultaneous wavelengths!

- ✓ Pain-free treatment with fast-acting results
 - ✓ Innovative device that promotes skin regeneration using light
 - ✓ High-powered all-in-one laser treatment with exceptional satisfaction
- Benefits: Instant skin tone improvement and tightening of sagging tissues

★ CHANGE Tune Face & Tune Body

Add Tune to Tune + stem cell hydration for powerful tightening!

- ✓ Device supports both RF (radiofrequency) and ultrasound modes
 - ✓ Delivers a 40.68MHz electromagnetic field to water molecules, which make up over 70% of the skin
 - ✓ Regenerates damaged collagen in the face and body
- Benefits: Lifting and tightening

CHANGE – Calcium Collagen Filler Lituo

Lituo is gaining attention as a “transformer” in the filler world, thanks to its broad, customizable applications.

- ◆ Formulated with calcium, a component naturally found in the human body, it offers excellent biocompatibility.
- ◆ It not only restores volume but also stimulates collagen synthesis.

CHANGE Filler, Botox

Through personalized consultations and tailored designs, we ensure each customer achieves their desired look and feel.

- ◆ Natural design that brings about visible changes without being excessive.
- ◆ Select fillers based on treatment objectives.
- ◆ Procedures are performed safely in a fully sterilized environment.
- ◆ Combined with years of expertise accumulated by the director of CHANGE, we deliver flawless results.

Customized procedures based on treatment areas

Painless during treatment, with quick return to daily activities

Uses products with proven safety and reliability

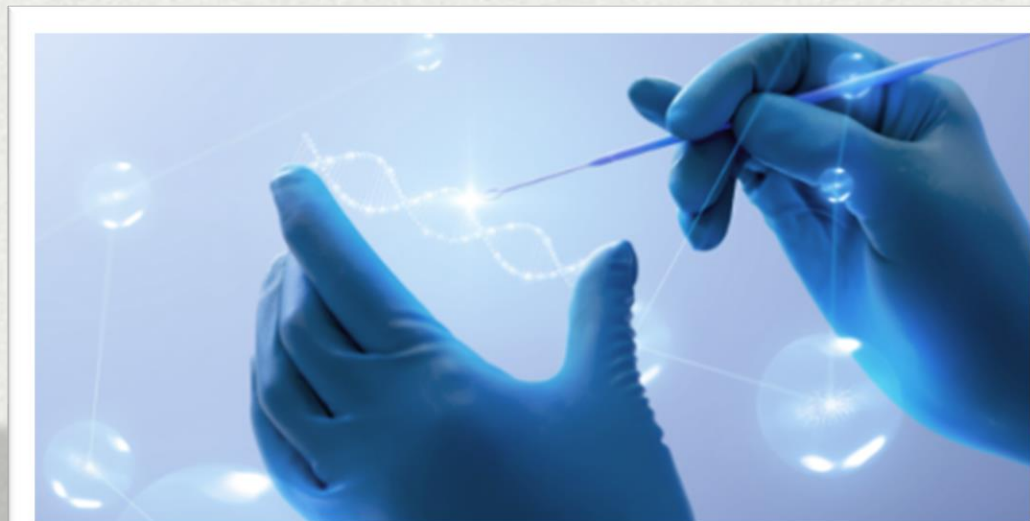

Facial contour correction with a simple procedure

CHANGE – Stem Cell Therapy

A higher-level cell treatment

Utilizes various cells extracted from blood, bone marrow, and fat for therapeutic purposes.

- Especially, stem cells derived directly from adipose (fat) tissue exhibit excellent self-regeneration capability.
- They help improve skin tone and elasticity.
- By activating surrounding growth factors and cells, they reduce the risk of side effects.

Huricell – CHANGE Stem Cell Extractor

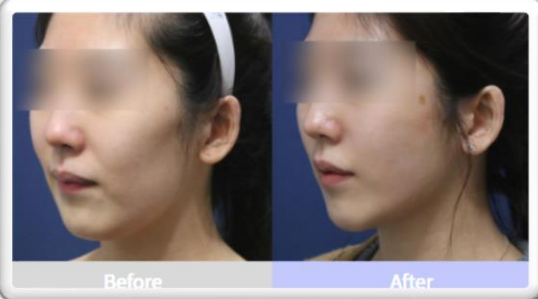

Huricell is a fully automated centrifuge device designed to extract stem cells from adipose tissue collected from the human body.

- It is Korea's first fully automated system for cell separation, completing the entire process from fat tissue washing to separation in just 70 minutes — the shortest time available.
- Its fully integrated process minimizes stem cell damage and contamination, enabling a high yield of viable stem cells and maximizing graft survival.
